

# NUTRIENT MANAGEMENT (CSP Enhancements)

## Enhancement Activity Task Sheet

November 2005

WV-CSPENM-TS

Client's Name:

### Worksheet 7 - Split nitrogen application

**Payment = \$2/Acre to use split applications of Nitrogen (intervals of 30 days or more) in field crops and forages. Applications may be synthetic fertilizer and/ manure or litter.**

Split application is required to match nitrogen supply with crop uptake during the growth periods. Initial nitrogen will be 50% or less of the total projected needs with the remainder applied during at least one other growth period and based on soil or plant testing ( i.e.: PSNT) and/or NRCS/WVU/CCA recommendations. Nitrogen will be applied between March 15 to end of the growing season.

Use this (or similar) table to document location and incorporation method used.

| Tract & Field #s<br>or Names | Acres | Crop | Date and amount<br>(lbs/ac) of 1 <sup>st</sup><br>application | Date and amount<br>(lbs/ac) of 2 <sup>nd</sup><br>application |
|------------------------------|-------|------|---|---|
|                              |       |      |   |   |
|                              |       |      |   |   |
|                              |       |      |   |   |
|                              |       |      |   |   |
|                              |       |      |   |   |
|                              |       |      |   |   |
|                              |       |      |   |   |
|                              |       |      |   |   |
|                              |       |      |   |   |

### Split Application of Nitrogen Certification

I certify that I have used split applications of nitrogen on the field(s) listed in the table above and followed allowable application dates.
